Panda P2 Intra oral scanning systems A state-of-the-art scanner!

Go digital with one of the smartest scanners in the world. With the P2 system you can scan all types of restorations.

The output from P2 system is 3D HD quality and the files you send to your laboratory are open source, STL or PLY.

The P2 scanner has been sold to clinics in EU since 2019 with very good results. Dentists and their teams are very satisfied with the ease of use, speed of the scanner and the premium output it gives.

Interviewing laboratories regarding the files from the P2 system gives at hand that the PLY input in color is super crisp and perfect to work from.

Send the files by a click of a button to your favorite lab or let us help you to contact our laboratory partners to offer you premium quality to lowest cost.

The P2 system is unique though it's a total open system free from any fees or hidden costs. Its also free of charge for the laboratory. All labs with a digital design system can open and use the files in just seconds.

Go digital with P2 gives you a ROI in many cases less than a year due to its low price.

Same scanner with 2 setups

- **All-in-one system.**
Cart with stationary CPU together with a superb touch screen.
- **Laptop version.**
If you have a need to move scanner to a secondary clinic.
